Rebecca Chiasson

SPEAKER

MEDIA KIT

Hi. I'm Rebecca!

SPEAKER

I am Rebecca Chiasson, I serve as the Chemistry Manager at the Louisiana State Police Crime Lab. Throughout my career, I have dedicated myself to the science behind drug identification, forensic chemistry, toxicology, and helping communities better understand the evolving drug landscape.

With extensive experience in forensic drug chemistry and crime scene processing, I have been qualified as an expert witness in state and federal courts, providing scientific insight in cases involving controlled substances. My work allows me to bridge the gap between the laboratory and the community by translating complex science into practical information that helps professionals recognize and respond to emerging drug threats.

I am actively involved in professional organizations, state-level committees, and task forces focused on drug policy, public safety, and impaired driving. I have played a role in identifying, researching, and educating others about new synthetic drugs and emerging substances that create significant public health concerns.

Through my work with the Strategic Highway Safety Plan in Louisiana and my involvement in drug-impaired driving initiatives, I continue to advocate for science-based education and awareness. My mission is to share the knowledge gained from the laboratory and help communities, law enforcement, educators, and professionals better understand the challenges created by today's rapidly changing drug environment.

SPEAKING TOPICS

- Current Drug Trends
- Drug Chemistry
- Toxicology
- Polydrug use Trends based on Toxicological Data

FEATURED MEDIA

Client Testimonial

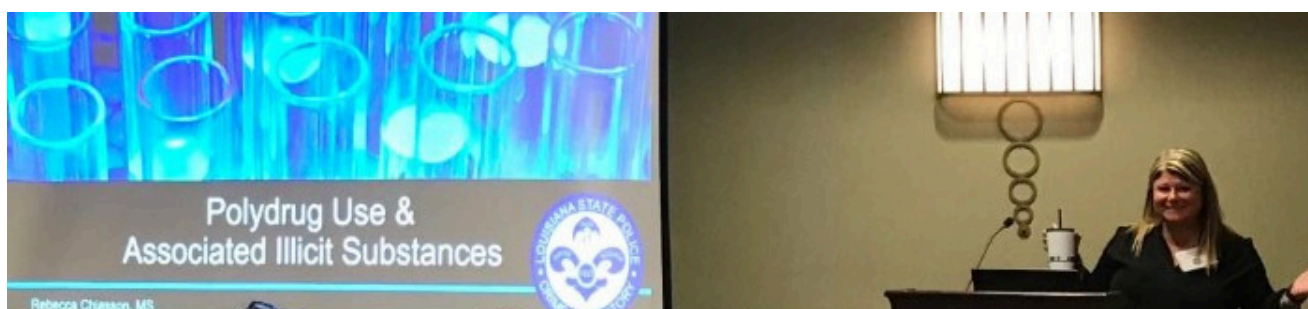

“Rebecca has a unique ability to take complex science and break it down into information that anyone can understand. Her extensive knowledge of forensic chemistry and emerging drug trends is incredibly valuable, and she brings a level of expertise that helps professionals better recognize and respond to the challenges they face. Rebecca’s passion, experience, and ability to connect the science to real-world situations make her an exceptional speaker and resource.”

Rebecca Chiasson

TALL COP SPEAKERS NETWORK

Proudly known as The "Cajun Chemist", my passion is bringing the science of forensic chemistry out of the laboratory and into the hands of the professionals and communities who need it most. Through my presentations, I combine science, real-world experiences, and a little Cajun personality to make complex topics understandable, engaging, and relevant. My goal is to help audiences see beyond the headlines and understand the chemistry, trends, and dangers behind today's evolving drug challenges.

WHO I WORK WITH

I work with professionals on the front lines of prevention, public safety, and treatment who need a deeper understanding of today's evolving drug landscape. I partner with prevention professionals, law enforcement, probation teams, treatment providers, and community organizations to provide science-based education and practical insights into emerging substances, drug trends, and public health challenges.

WHAT YOU CAN EXPECT

My goal is to help professionals better understand the chemistry behind the substances they encounter and use that knowledge to make informed decisions, strengthen prevention efforts, and better serve their communities.

GET IN TOUCH

Interested in bringing science-based drug education and real-world forensic insight to your organization? I would love the opportunity to share my experience and help your team better understand the evolving drug landscape.
